CEROVIEW CREATES DUAL-SCREEN KIOSK

Irvine, CA – CeroView , a leading provider of turnkey kiosk solutions, today announced the production of a new kiosk design. Called the “CyberTouch,” this new kiosk is the most modular kiosk on the market. Available as a stand-alone, wall mount or tabletop unit, the kiosk has been designed to accommodate two LCD panels. The wall mount version is designed to support multiple printer configurations, video camera, handset, keyboard, trackball, card reader, bill acceptor, and coin acceptor -- simultaneously.

“We saw an overwhelming demand to design a versatile kiosk with dual-screen capabilities,” states CeroView’s President, Derek Fretheim. “With the popularity of kiosks being used in retail and point-of-sale applications, we knew that a well designed modular kiosk capable of accommodating multiple peripherals would be popular.” The CyberTouch is consistent with CeroView’s overall strategy to present sleek looking kiosk designs without compromising overall reliability or performance. The standard CyberTouch kiosk comes equipped with a 15-inch LCD touch screen with a backlit signage area positioned strategically above the touch panel. This upper portion can support either a 17 or 18-inch LCD display for interactive advertisements.

Pricing for the CyberTouch kiosk starts at \$5,000 and will range to \$10,000 depending on the configuration.

CeroView (www.ceroview.com) is a high growth company specializing in creating and maintaining Internet-based and interactive business to business and business to consumer products and services. CeroView offers over 20 dynamic and contemporary kiosk designs. The firm has developed a number of e-commerce ventures, media systems, point-of-purchase applications and related web-based processes.
